THE JOHNSON COUNTY SHERIFF'S OFFICE

PRESENT:

ADVANCED DIGITAL IMAGING

The Johnson County Sheriff's Office, Criminalistics Laboratory, is proud to announce that it is hosting an **advanced five-day**, hands-on training program in forensic digital imaging **April 2 – 6, 2018**. This class will be held at the JCSO Crime Lab in **Olathe, Kansas**.¹

This **advanced five-day** course will provide participants with a comprehensive understanding of the Microsoft® Windows® environment as well as develop a thorough understanding of Adobe® Photoshop®. In addition, participants will have a thorough understanding of digital imaging concepts and how these concepts can aid in the forensic investigative process. Participants will benefit from applying these newly learned concepts in a practical exercise using their own images!

This hands-on training program will focus on **advanced** imaging concepts and techniques for enhancing digital photographs, preparing proof sheets, creating court exhibits and more. It will also provide an advanced understanding of digital imaging technologies as well as deliver an indispensable understanding of and hands-on experience with the most commonly used image enhancement tools. For example, you will learn how to scale digital images for accurate, life-size output as well as learn the recommended procedures for enhancing various types of images for maximum image quality and contrast. You will also learn how and when to apply different techniques to remove background noise as well as how to enhance contrast to bring out ridge detail that is barely visible to the human eye.

With more than 20 years of AFIS and digital imaging experience, David Witzke (better known as Ski), Vice President of Program Management for Foray Technologies, is considered to be one of the foremost experts in forensic digital imaging technologies. During the past 20 years, Ski has conducted literally hundreds of beginner, intermediate and advanced digital imaging training programs for law enforcement agencies at all levels – local, State and Federal – throughout the United States and Canada, and he has earned both national and international recognition for conducting user training for both novice and experienced computer users in a wide range of forensic disciplines. Ski was the guest instructor for the Digital Processing of Evidentiary Photography training program at the FBI Academy in Quantico, Virginia for eight years, and was the instructor for the Forensic Digital Image Processing training program at the British Columbia Institute of Technology (BCIT) in Vancouver, BC for more than six years.

Ski is a contributing writer for three well-known books within the forensic science community: *Crime Scene Photography* (Second Edition, Published 2010 by Academic Press), *Introduction to Crime Scene Photography* (Published 2012 by Academic Press) and *Footwear, The Missed Evidence* (Third Edition, Published 2013 by Staggs Publishing).

PLEASE NOTE THAT ATTENDEES ARE REQUIRED TO PROVIDE THEIR OWN LAPTOPS WITH ADOBE PHOTOSHOP CS5 OR LATER INSTALLED AND BRING A MOUSE

¹ Participants must attend all five days of training. It is also recommended that each person attending this program have at least a basic understanding of the Microsoft Windows XP or 7 operating system.
